

Comparison of Emission Reduction Goals in Legislative Proposals in the 110th Congress (as of January 11, 2008)

This graph depicts emissions targets from some of the major climate change bills in Congress. Targets are based on comparison with historical year emissions. Kerry-Snowe, Sanders-Boxer, and Waxman specify future emissions as a percentage of 1990 emissions. For Lieberman-Warner, Lieberman-McCain, Udall-Petri, and Bingaman-Specter, emission targets for covered sectors are related to historical emissions for those sectors, and total emissions are assumed to match those in the corresponding historical year.

¹ Bill contains flexibility mechanisms which allow actual emissions to rise above the target.

² The Kerry-Snowe target is overlaid by others: it is nearly identical to Sanders-Boxer before 2020 and to Lieberman-Warner from 2020-2030.
