## U.S. net energy imports continue to decline (except for liquids in the near term)

 reflecting increased oil and natural gas production coupled with slowly growing or falling demand

- The share of net imports in total U.S. liquids consumption declines from 60\% in 2005 (24\% in 2015) to $7 \%$ by 2040, which would be its lowest level since 1957.
- The United States becomes a net exporter of natural gas before 2020, largely because of growth in liquefied natural gas exports.
- The United States continues to be a net exporter of coal (including coal coke) over the entire projection.
